

Detroit Diesel® DD15 New Water Pump

AFA Industries is pleased to announce the availability of a new Water Pump for the Detroit Diesel® DD15 engine applications. This is a brand new water pump with an improved design fan mounting hub, unlike some other suppliers who offer a cast iron mounting hub. The aluminum casting allows for better heat reduction and better machined passages for maximum coolant flow. The stainless steel impeller resists rust and corrosion and allows for maximum circulation of coolant.

AFA Part No. DA4722000401 is in stock and available today. Also available soon, will be Engine Kits, Valve train parts, Oil pumps, Cooling System Components, Fuel System Components, and other engine parts to help you repair most components for most Detroit Diesel DD15® engines. Contact your local sales representative or AFA Certified Distributor for more information.

Total System Engineering - In 1987, AFA Industries started manufacturing OE and Aftermarket sealing products. Since then we have expanded into a global engine parts manufacturer with an extensive system of quality control and inspection that is second to none in the industry. Our technology is always state of the art. Materials used in our parts are always OE quality or better. Our manufacturing methods are constantly monitored for consistency and efficiency. The results are products that will meet or exceed the expected life cycle of any heavy duty diesel engine in any application - guaranteed.

Consult your OE reference materials for exact applications.

Refer to the OEM service manual for proper engine assembly procedures.
